

Make the text bigger on an Android phone

Neighbor Tech - a ProSystems program - Keep this handy

For: Android phone

Bigger words on your Android phone. Brands differ a little, so look for the same key words.

Step by step

1. Open the Settings app.

It usually has a gear icon. Swipe down from the top and tap the gear, or find 'Settings' in your apps.

2. Tap 'Display'.

On some phones this is called 'Display & brightness' or 'Screen'.

3. Tap 'Font size' (sometimes 'Font size and style').

You may first need to tap 'Advanced' or 'Text and display'.

4. Drag the slider to make the words bigger.

The preview changes as you slide. Stop where it's comfortable, then tap 'Apply' or 'Done' if asked.

Good to know

- For bigger buttons and icons too, look for a separate 'Display size' setting.
 - Shortcut: tap the magnifying glass at the top of Settings and type 'font size'.
-

If you get stuck

Android phones vary by brand (Samsung, Google, Motorola). If the words don't match exactly, look for 'Font' or 'Display' - or call us.
